Page 201.

5.41 Let $x$ be the number of successes observed in a sample of $n = 5$ items selected from $N = 10$. Suppose that, of the $N = 10$ items, 6 are considered "successes". Find the probability of

(a) no successes

(b) at least two successes

(c) exactly two successes

Answers

Page 201.

5.41

(a) 0 (this is impossible and hence has probability 0)
(b) .98
(c) .24

5.43

(a) 2 blue and 1 red candy. .54
(b) all red candies. .02
(c) all blue candies. .18

5.45

(a) Write a formula for $p(x)$, the probability of exactly $x$ successes.
$$\frac{C^3_x C^2_{5-x}}{C^5_2}$$

(b) What are the mean and variance of this distribution?
$\mu = .8$
$\sigma = .6$

5.45 A company has 5 applicants for 2 positions: 2 women and 3 men. Suppose that the 5 applicants are equally qualified and that no preference is given for choosing either gender. Let $x$ equal the number of women chosen to fill the 2 positions.

(a) Write a formula for $p(x)$, the probability of exactly $x$ successes.

(b) What are the mean and variance of this distribution?
